

CEPREMAP / DBNOMICS

# Macroeconomic Outlook – July 2024

## DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP, and will be updated every Thursday at 6:00pm
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at [jocelyn.maillard@cepremap.org](mailto:jocelyn.maillard@cepremap.org)

## Executive summary

- Markets and policymakers are following in parallel headline inflation, financial-market and labor-market trends.
- In response to inflationary pressures, monetary policy has been tightened up to levels unheard of for the last 20 years. However, a loosening of monetary policy seems to have started. The ECB decreased its rates in June for the first time since 2019. The Fed, however, maintained them at their level and now only expect one 25bp cut in 2024.
- Both headline and core inflations dropped below 3% in Europe. In the US, headline inflation remains slightly above 3% while core inflation has slightly decreased but remains high. The return to the 2% inflation target is more complex in the US as the Fed must deal with labor-market overheating.
- Most raw-material prices have come back to their pre-war levels. Natural-gas price difference between Europe and the US remains high. Tensions in the Red sea led to a massive rise of transportation costs for containers since the beginning of the year, potentially leading to a new rise of inflation.
- GDP growth beat market expectations in the third and fourth quarters of 2023 in the US. However, it was negative in the main countries of the Euro Area as private consumption dropped. Lower differences appear for the first quarter of 2024. However, the OECD now forecasts a below-one-percent growth for the Euro Area versus a 2.1% growth for the US for 2024. This downward revision for the Euro Area is notably a consequence of high energy costs and trade slowdown.
- Sovereign yields remain at a high level in the Euro Area. They have however decreased over the last few months with the fall of inflation. The spreads between core countries and the periphery have also been declining as macroeconomic results have overcome expectations in countries as Spain or Greece. However, the results of the European elections caused an increase last week.

# I Growth and inflation in selected G20 countries

## **A The growth slowdown**

# Growth rates were quite similar in advanced economies in the first quarter

Growth was positive for all main advanced economies in the first quarter of 2024 (except for Japan), following a strong divergence in 2023. However, the OECD have severely revised downward their growth projections for 2024 for European countries and revised upwards those for the US.

Yearly GDP growth rate (YoY % change)

Quarterly GDP (base 100 in 2019-Q4)

# Growth remains at high levels in emerging Asian countries

India, Indonesia and China have overperformed the other developing countries in 2023. South Africa has had a particularly low growth. The OECD have lifted their 2024 growth projections for Brazil and Mexico, but they have revised downwards South-African growth.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %

Quarterly GDP (base 100 in 2019-Q4)

# Government debts have reached a new plateau in G4 countries<sup>1</sup>

Inflation acted as a moderating factor on the evolution on debt ratios. Debt-to-GDP ratio increased to 110.7% for the first quarter of 2024 in France. Deficits are quite large: from 3.0% in Germany to 7.5% in the US.

General Government debt (% of GDP) – Since 2020

General Government deficit (% of GDP) – Since 2020

# Consumer and business confidences remain slightly below their pre-covid levels for most countries

Consumer confidence strongly decreased in the US in May while it rose in Europe.

Consumer confidence indicator – Since Jan. 2020

Business confidence indicator – Since Jan. 2020

## **B The seeds of inflation**

# Prices of raw materials have mostly returned to their pre-war range

Natural-gas prices are now at almost a one-to-five difference between the US and Europe. Copper prices increased last month because of booming global demand but are now slowly decreasing. Wheat prices have strongly decreased since the Russian invasion to reach their pre-COVID level.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices<sup>1</sup> (€/MWh)

Copper prices in historical perspective (USD/ton)

CBOT Wheat (USD/Bushel)

# New supply-chain disruptions have occurred in 2024

Transportation costs have tripled since the beginning of the year because of geopolitical tensions in the Red Sea and they keep increasing.

**% of EU business in the construction industry reporting shortages of materials and equipment as a limiting production factor**

**Shipping Container Index (based on spot rate for 40 feet containers)**

# Labor markets remain tight... (1/2)

The unemployment rate, both in the US and the EZ, remain at very low levels. In the US, the vacancy/unemployment ratio is falling, it is now back to its pre-covid level.

**Beveridge curve - USA, Monthly**

**Unemployment rate (% of labor force) - Monthly**

# Wage inflation remains higher than price inflation

It has been slowly cooling down in the US and in France. However, in the Euro Area, wage inflation indicators increased.

Wage growth tracker (nominal wage growth of individuals) – US (Monthly)

Indicator of negotiated wages in the Euro Area (Quarterly)

## **C Inflation unbound**

# Inflation is coming down from its peak both in Europe and the US

Inflation is plateauing. After the huge drop in October, headline inflation is close to 2% in the Euro Area. Inflation remains above 3% in the US while the UK reached the 2% threshold. Core inflation is slowly decreasing, it fell below 3% for the first time since 2021 in the Euro Area in March.

CPI and core inflation in advanced economies (YoY % change)

Monthly Year-on-Year inflation rates (%) – 2023/24											
Country	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun
<b>US</b>	3.7	3.7	3.2	3.1	3.3	3.1	3.2	3.5	3.4	3.3	-

Mexico	5.1	4.8	4.6	4.5	4.3	4.3	4.7	4.9	4.4	4.4	4.7	4.7
Indonesia	3.5	3.1	3.3	2.3	2.6	2.9	2.6	2.6	2.8	3.1	3.0	2.8

CPI Inflation (YoY % change) – since Jan 2021

# Implied GDP deflators are decreasing but remain at high levels in Europe

In the US, however, it is lower than headline inflation levels.

## Quarterly implied GDP deflator

Implied GDP deflator (YoY % change)								
Country	Q2-22	Q3-22	Q4-22	Q1-23	Q2-23	Q3-23	Q4-23	Q1-24
USA	7.7	7.3	6.4	5.3	3.5	3.2	2.6	2.4
Germany	6.0	4.7	6.0	6.8	6.5	6.8	6.0	4.5
France	2.4	3.5	4.5	5.6	6.0	5.2	4.5	2.8
UK	5.3	6.2	7.5	7.8	8.2	7.4	5.1	4.1

## Quarterly implied GDP deflator – Since Q1-1992

## II Monetary policy

## **A In the US**

# Monetary policy decisions from the Fed (1/2)

The Fed decided to maintain interest rates at their levels in June as they consider that inflation remains at a too high level while labor market is slowly cooling. President Powell explained that they expect to cut rates at some point in 2024 but are willing to maintain them at their high level for as long as necessary.

## Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	11-23	12-23	01-24	02-24	03-24	04-24	05-24
PCE inflation	2.7	2.6	2.5	2.5	2.7	2.7	2.6

## PCE Inflation Projections as of June 2024 (%)

## Key considerations

- **The target range of the federal fund rates was maintained at 5.25%-5.50% on June 11<sup>th</sup>.**
- The decision comes at a surprise, a first cut was expected after already six pauses since September. Interest rates are at their highest levels since 2001.
- The Fed revised up inflation projections from 2.4% to 2.6% for 2024.
- **Next meeting will be on July 31<sup>st</sup>. The key issue is whether a first cut will occur.**

## Federal Reserve economic projections as of 11th June 2024

Indicator	2024	2025	2026	Longer run
Change in real GDP	2.1	2.0	2.0	1.8
Unemployment rate	4.0	4.2	4.1	4.2
Inflation	2.6	2.3	2.0	2.0
Federal funds rate	5.1	4.1	3.1	2.8

“we do not expect it will be appropriate to reduce the target range for the federal funds rate until we have gained greater confidence that inflation is moving sustainably toward 2 percent. So far this year, the data have not given us that greater confidence.”

# Monetary policy decisions from the Fed (2/2)

The Federal Reserve’s so-called dot plot shows the median year-end projection for the federal fund rates. In June, Fed members have forecasted higher interest rates than previously. It notably implies that Fed members now consider that only one 25-bps cut will occur in 2024.

FOMC participants’ assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 11<sup>th</sup> June

# Nominal long-term rates are at high levels

Real rates however are expected to stay around 2% in real terms.

Federal funds interest rate

Inflation Expectations – US (%)

10-Y Nominal yield – US

Forward Rates on 10-Year U.S. Treasuries (%)

# The US yield curve has been inverted for two years

U.S. 10Yr/2Yr Spread – Since Jan. 1978

## **B In the Euro Area**

# The ECB cuts its key interest rates in June

President Lagarde explained that ECB actions over the last few months have brought inflation down. Therefore, the ECB decided that it is time to loosen monetary policy although wage growth is high and inflation projections were revised upwards.

**Inflation expectations & projections as of June 6<sup>th</sup> 2024 (%)**

## Key considerations

- **The Governing Council decided to decrease the three key ECB interest rates by 25bp in its June meeting. It is the first cut since 2019 after nine months of holding rates steady.**
- Looking ahead, ECB staff have slightly revised upwards their inflation projections. Headline inflation is now expected to average 2.5% in 2024 while core inflation should reach 2.8%. However, they also revised their output growth projections upwards for 2024 from 0.6% to 0.9%.
- **The next meeting is set on July 18<sup>th</sup>. The ECB hinted that the interest rate should remain at its current level.**

ECB economic projections as of June 6 <sup>th</sup> 2024			
Indicator	2024	2025	2026
<b>Change in real GDP</b>	0.9	1.4	1.6
<b>Unemployment rate</b>	6.5	6.5	6.3
<b>Inflation</b>	2.5	2.2	1.9

“Based on an updated assessment of the inflation outlook, the dynamics of underlying inflation and the strength of monetary policy transmission, it is now appropriate to moderate the degree of monetary policy restriction after nine months of holding rates steady.”

# In the Eurozone, nominal rates are going up again, after having decreased following the fall of inflation

Expected real rates, however, are near zero in the longer run. ECB deposit rates decreased to 3.75%.

ECB deposit rate

Inflation Expectations<sup>1</sup> - Germany (%)

10-Y Nominal yield – German Bund

Forward Rates on 10-Year German Bund (%)

# The German-yield curve has been inverted for 18 months, for the first time since 2008

This usually reflects a risk of recession or sluggish growth

**Bund 2Yr/10Yr Spread – Since Jan 1998**

# After an appreciation at the end of 2022, the Euro has been rather stable

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 JUNE 2022

### **III Impact on yields and spreads**

# In Europe, sovereign yields remain at particularly high levels

Despite their strong decrease during the second semester of 2023. The spread between France and countries of the periphery is decreasing.

Italian, Greek and French 10-Y yields – Since Jan. 2021

# Tensions on spreads have moderately eased off for the periphery since their peak in 2022

However, they increased after the results of the European elections.

Italian, Greek and French spreads over 10Y German bund – Since Jan. 2021

# High-yield corporate-bond spreads have been decreasing in the last few months both in the US and the Euro Area.

They reached their lowest levels since the beginning of 2022. The spread between the Euro Area and the US has also been decreasing

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads – Since 2022

## **IV Impact on stock markets**

# Stock-market indices have strongly increased during the last few of months, except for the Shanghai Composite

The Shanghai composite has dropped in the last few months. It remains 17% lower than its pre-war level. The Eurostoxx 50 fell after the results of the European elections and the dissolution of the French National Assembly. As such, US stocks are now higher than the Eurostoxx.

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

# Volatility on US financial markets has been below its historical average level since November

VIX index – Since 2000

VIX index – Since 2022

# Financial stress indicators returned to pre-war levels

**Composite Indicator of Systemic Stress (daily) – Since Jan. 1980**

**Composite Indicator of Systemic Stress (daily) – Since Jan. 2020**

# Shiller CAPE ratio is higher in the US than in Europe

Shiller CAPE ratio is close to its pre-Covid level and to its historical average in Europe.

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
