

CEPREMAP / DBNOMICS

Macroeconomic Outlook – January 2025

DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP, and will be updated every Thursday at 6:00pm
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at jocelyn.maillard@cepremap.org

Executive summary

- Markets and policymakers are following in parallel headline inflation, financial market and labor market trends.
- In response to inflationary pressures, monetary policy was tightened up to levels unheard of for the last 20 years. However, with the fall of inflation, a loosening of monetary policy has started. The ECB decreased its rates four times by 25bp since June while the Fed also cut its rates by 100bp since September.
- Headline inflation is now at 2.4% in Europe while it is finally below 3% in the US. Core inflation has decreased but remains higher than headline inflation. The return to the 2% inflation target is more complex in the US as the Fed first had to deal with labor-market overheating.
- Most raw-material prices have come back to their pre-war levels. Natural-gas price difference between Europe and the US remains high. Tensions in the Red sea led to a massive rise of transportation costs in 2024 while the threat of tariffs by US president-elect has also increased transportation costs in the last month.
- GDP growth differences between the US and Europe remained strong in 2024, and the OECD expects a 1.3%percent growth for the Euro Area versus a 2.4% growth for the US for 2025.
- Sovereign yields remain at a high level in the Euro Area. They decreased over the past year with the fall of inflation. The spreads between core countries and the periphery have also been declining as macroeconomic results have overcome expectations in countries as Spain or Greece but have been disappointing in Germany or France.
- Following the results of US elections, US stock markets rose while the US dollar strongly appreciated.

I Growth and inflation in selected G20 countries

A The growth slowdown

Growth rates are diverging in advanced economies

Growth remains particularly high in the US while it increased in the Euro Area in the third quarter of 2024. The OECD expects low growth for 2025 and 2026 for European countries and high growth for the US.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2021	2022	2023	2024(E)	2025(P)	2026(P)

Quarterly GDP (base 100 in 2019-Q4)

Growth remains at high levels in emerging Asian countries

India and Indonesia outperforms other emerging countries. South Africa has particularly low economic growth. The OECD lifted their growth projections for Brazil.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2021	2022	2023	2024(E)	2025(P)	2026(P)

Indonesia	1.1	1.3	1.2	1.3	1.3	1.3	1.2	1.2	1.2

Quarterly GDP (base 100 in 2019-Q4)

Government debts are increasing in G4 countries¹

Inflation acted as a moderating factor on the evolution on debt ratios. With the fall of inflation, debt is increasing again. Deficits are quite large: from 2.4% in Germany to 7.9% in the US, and do not seem to be decreasing.

General Government debt (% of GDP) – Since 2020

General Government deficit (% of GDP) – Since 2020

Consumer and business confidence indices are below their pre-covid levels

Business confidence has been on a downward path for all countries while consumer confidence is particularly low for France.

Consumer confidence indicator – Since Jan. 2020

Business confidence indicator – Since Jan. 2020

B The seeds of inflation

Prices of raw materials have mostly returned to their pre-war range

Natural-gas prices are now at a one-to-three difference between the US and Europe. Wheat prices have strongly decreased since the Russian invasion to reach their pre-COVID level.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices¹ (€/MWh)

Copper prices in historical perspective (USD/ton)

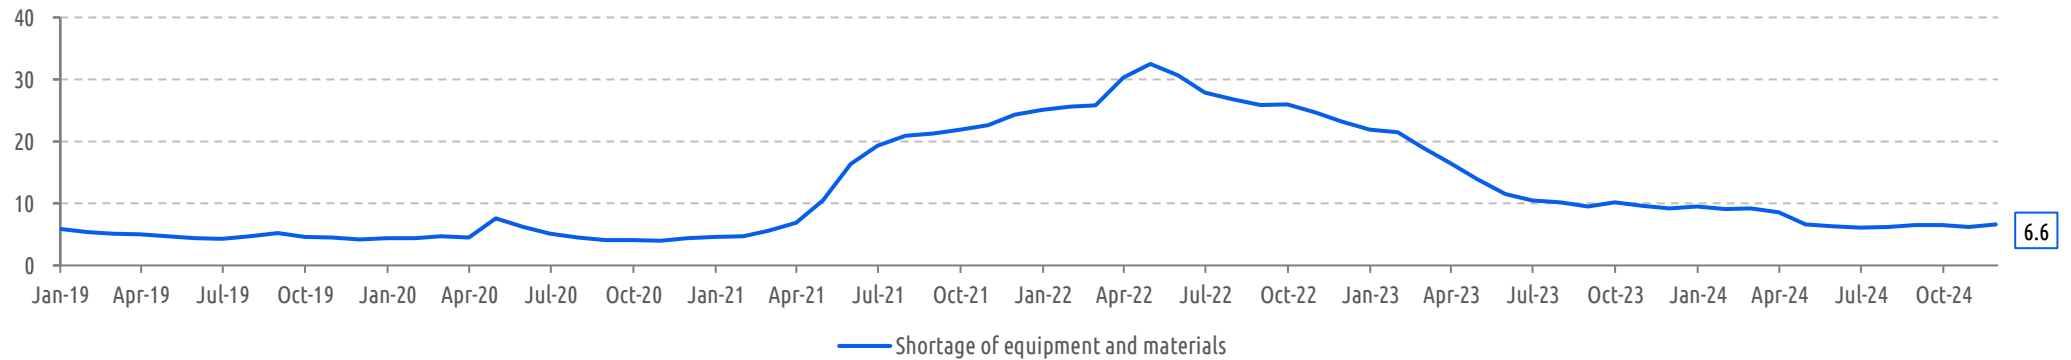

CBOT Wheat (USD/Bushel)

New supply-chain disruptions have occurred in 2024

Transportation costs also increased following the threat of tariffs by incoming US President Trump.

% of EU business in the construction industry reporting shortages of materials and equipment as a limiting production factor

Shipping Container Index (based on spot rate for 40 feet containers)

Labor markets remain tight... (1/2)

The unemployment rate, both in the US and the EZ, remains at very low levels. In the US, the vacancy/unemployment ratio fell to its pre-covid level. In the Euro Area, it has also been falling but it remains high.

Beveridge curve - USA, Monthly

Unemployment rate (% of labor force) - Monthly

Indicator	12-23	01-24	02-24	03-24	04-24	05-24	06-24	07-24	08-24	09-24	10-24	11-24
Rate	3.2	3.2	3.3	3.3	3.4	3.5	3.5	3.5	3.4	3.4	3.4	3.4

Wage inflation remains higher than price inflation

While wage inflation indicators seemed to be decreasing in Europe, the price of negotiated wages increased during the third quarter in the Euro Area. Wage inflation is lower in France.

Wage growth tracker (nominal wage growth of individuals) – US (Monthly)

Indicator of negotiated wages in the Euro Area (Quarterly)

C Inflation unbound

Headline Inflation is now close to the 2% target for most advanced economies

Headline inflation increased however for European countries in November and December. Core inflation is slowly decreasing but remains higher than 2% in all countries (but Italy).

CPI and core inflation in advanced economies (YoY % change)

Monthly Year-on-Year inflation rates (%) – 2023/2024											
Country	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

CPI Inflation (YoY % change) – since Jan 2021

Inflation has been decreasing in most emerging economies

However, it is still at rather high levels. China remains an extraordinary exception with a very low level of inflation for a long time.

CPI inflation in emerging economies (YoY % change)

Monthly Year-on-Year inflation rates (%) – 2023/2024												
Country	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
China	(0.8)	0.7	0.1	0.3	0.3	0.2	0.5	0.6	0.4	0.3	0.2	0.1
India	4.6	4.9	4.2	3.9	3.9	3.7	2.1	2.4	4.2	4.4	3.9	-
South Africa	5.4	5.5	5.3	5.1	5.1	5.0	4.6	4.4	3.7	2.8	2.8	-
Brazil	4.5	4.5	3.9	3.7	3.9	4.2	4.5	4.2	4.4	4.8	4.9	4.8
Mexico	4.9	4.4	4.4	4.7	4.7	5.0	5.6	-	-	-	-	-
Indonesia	2.6	2.8	3.0	3.0	2.8	2.5	2.1	2.1	1.8	1.7	1.6	1.6

CPI Inflation (YoY % change) – since Jan 2021

Implied GDP deflators strongly decreased over the last couple of years

They are getting close to the 2% threshold for most advanced economies.

Quarterly implied GDP deflator

Implied GDP deflator (YoY % change)								
Country	Q4-22	Q1-23	Q2-23	Q3-23	Q4-23	Q1-24	Q2-24	Q3-24
USA	5.3	5.3	3.5	3.1	2.6	2.4	2.6	2.3
Germany	6.8	6.8	6.3	6.3	5.3	3.8	3.4	2.8

UK	7.9	8.3	8.0	7.3	5.1	4.2	3.0	3.2

Quarterly implied GDP deflator – Since Q1-1992

II Monetary policy

A In the US

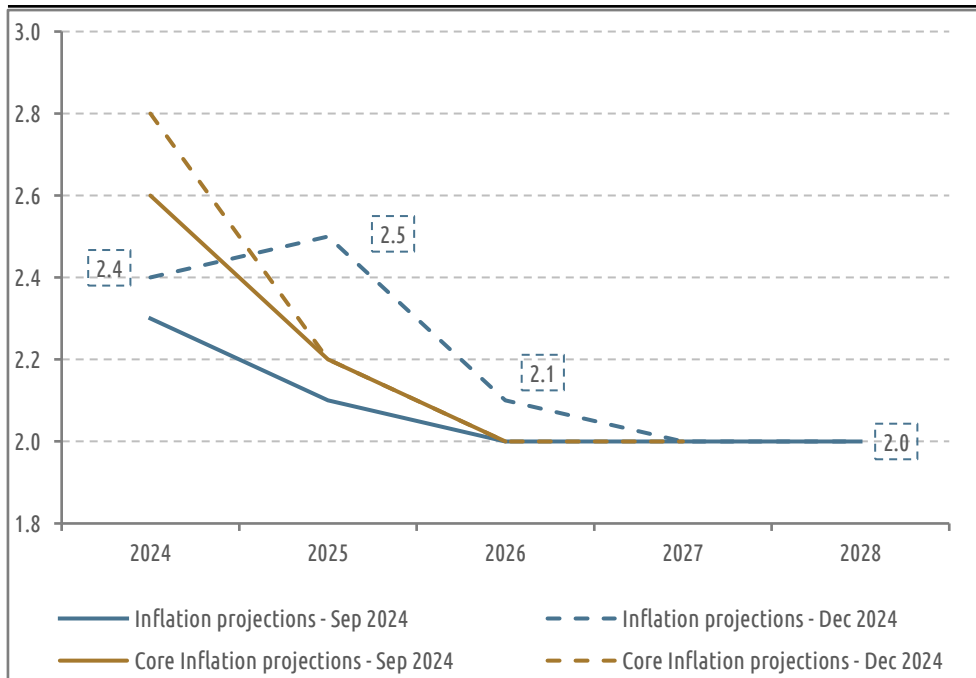

The Fed cut its rates by 25bp in December

This decision came as economic growth remains steady but as the risk of an unemployment surge has been increasing. As such, the Fed considers that its role is now to ensure maximum employment and a rise of purchasing power. However, they forecast a slower decrease of the interest rate in 2025 than previously.

Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	05-24	06-24	07-24	08-24	09-24	10-24	11-24
PCE inflation	2.6	2.4	2.5	2.3	2.1	2.3	2.4

PCE Inflation Projections as of September 2024 (%)

Key considerations

- **The target range of the federal fund rates was decreased to 4.25%-4.50% on December 18th.**
- The decision was expected by most investors. It is the third cut since September. The rate was previously at its highest since 2001.
- The Fed revised up inflation projections from 2.3% to 2.4% for 2024 and from 2.1% to 2.5% in 2025. Similarly, new GDP projections are higher from (2.5% vs 2.0% in September). Unemployment projections were revised down from 4.4% to 4.2%.
- **Next meeting will be on January 31st. The question is whether a new cut will occur.**

Federal Reserve economic projections as of 11th June 2024

Indicator	2024	2025	2026	2027
Change in real GDP	2.5	2.1	2.0	1.9
Unemployment rate	4.2	4.3	4.3	4.3
Inflation	2.4	2.5	2.1	2.0
Federal funds rate	4.4	3.9	3.4	3.1

“If the economy remains strong and inflation does not continue to move sustainably toward 2 percent, we can dial back policy restraint more slowly. If the labor market were to weaken unexpectedly or inflation were to fall more quickly than anticipated, we can ease policy more quickly.”

Monetary policy decisions from the Fed (2/2)

The Federal Reserve’s so-called dot plot shows the median year-end projection for the federal fund rates. In December, Fed members have forecasted higher interest rates than previously. It notably implies that Fed members now consider that only two 25-bps cut will occur in 2025.

FOMC participants’ assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 18th December

Nominal long-term rates are at high levels

Real rates however are expected to stay around 2% in real terms.

Federal funds interest rate

Inflation Expectations – US (%)

10-Y Nominal yield – US

Forward Rates on 10-Year U.S. Treasuries (%)

The US yield curve is positive for the first time in two years

This indicates trust in a durable decrease of inflation and in a sustained growth of the economy.

U.S. 10Yr/2Yr Spread – Since Jan. 1978

B In the Euro Area

The ECB cut again its rates in December while inflation slightly increased

President Lagarde explained that ECB actions over the last few months have brought inflation down and the ECB is confident that inflation will be around the 2% target in 2025. As such, they decided to lower their key rates to support economic growth that has been affected by some downside surprises.

Inflation expectations & projections as of December 12th 2024 (%)

Key considerations

- **The Governing Council decided to cut by 25bp its three key ECB interest rates. This is the fourth 25bp cut since June. They were previously at their highest level since the creation of the ECB.**
- Looking ahead, ECB staff have slightly decreased their inflation projections. Headline inflation is expected to average 2.4% in 2024 while core inflation should reach 2.9%. They especially revised downwards their output growth projections slightly for 2024 from 0.8% to 0.7% and in 2025 from 1.3% to 1.1%.
- **The next meeting is set on January 30th. The question is whether a new cut will occur.**

ECB economic projections as of December 12 th 2024				
Indicator	2024	2025	2026	2027
Change in real GDP	0.7	1.1	1.4	1.6
Unemployment rate	6.4	6.5	6.3	6.1
Inflation	2.4	2.1	1.9	2.1

“We expect inflation to fluctuate around its current level in the near term, as previous sharp falls in energy prices continue to drop out of the annual rates. It should then settle sustainably at around the two per cent medium-term target.”

In the Eurozone, nominal rates are decreasing but still at high levels

Expected real rates, however, are near zero in the longer run. ECB deposit rates decreased to 3% in December.

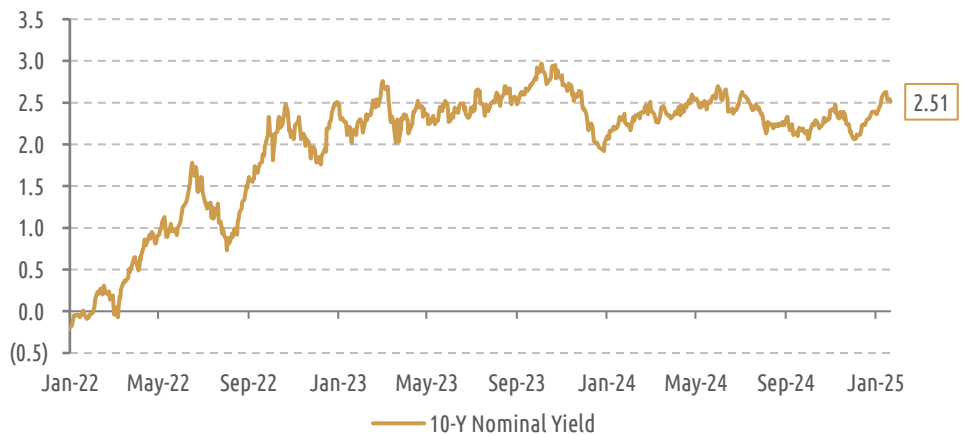

ECB deposit rate

Inflation Expectations¹ - Germany (%)

10-Y Nominal yield – German Bund

Forward Rates on 10-Year German Bund (%)

The German yield curve is positive, for the first time in almost two years

It is following the pattern of the US yield curve, signaling that investors believe that the decrease of inflation will be durable.

Bund 2Yr/10Yr Spread – Since Jan 1998

The Euro depreciated since the European election

It is at its lowest since the end of 2022.

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 JUNE 2022

III Impact on yields and spreads

In Europe, sovereign yields remain at particularly high levels

The yields are now the same for France and Greece.

Italian, Greek and French 10-Y yields – Since Jan. 2021

Tensions on spreads have eased off for the periphery since their peak in 2022

For France, spreads increased after the results of the European and legislative elections and have not returned to the 50bp medium-term value.

Italian, Greek and French spreads over 10Y German bund – Since Jan. 2021

High-yield corporate-bond spreads have been decreasing in the last few months both in the US and the Euro Area

They reached their lowest levels since the beginning of 2022. The decrease has been stronger in the US for the last few months.

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads – Since 2022

IV Impact on stock markets

Stock market indices have strongly increased during the last year except the Shanghai composite.

After a long fall, the Shanghai composite soared at the beginning of November following the announcement of strong fiscal stimulus measures. US indices have strongly increased following the results of the US elections for the Eurostoxx 50 is now catching up.

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

The VIX index surged at the beginning of August over fear of slow economic growth

It strongly decreased following the US elections.

VIX index – Since 2000

VIX index – Since 2022

Financial stress indicators returned to pre-war levels

Composite Indicator of Systemic Stress (daily) – Since Jan. 1980

Composite Indicator of Systemic Stress (daily) – Since Jan. 2020

Shiller CAPE ratio is higher in the US than in Europe

Shiller CAPE ratio is close to its pre-Covid level and to its historical average in Europe.

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
