

CEPREMAP / DBNOMICS

# Macroeconomic Outlook – February 2025

## DBnomics

- Most data presented in the forthcoming slides are extracted from DBnomics (<https://db.nomics.world/>), an open-sourced databank created at CEPREMAP, and will be updated every Thursday at 6:00pm
- The project has been financed by generous grants from Banque de France, AFD, DG Trésor, France Stratégie and OECD
- The executive director of the DBnomics project is Christophe Benz
- The slides have been designed by Daniel Cohen and are updated by Jocelyn Maillard and François Langot at CEPREMAP
- Links to the DBnomics data are available in the Appendix
- All materials presented here can be freely used with proper acknowledgment
- Questions and comments about the presentation can be addressed at [jocelyn.maillard@cepremap.org](mailto:jocelyn.maillard@cepremap.org)

## Executive summary

- Markets and policymakers are following in parallel headline inflation, financial market and labor market trends.
- In response to inflationary pressures, monetary policy was tightened up to levels unheard of for the last 20 years. However, with the fall of inflation, a loosening of monetary policy has started. The ECB decreased its rates five times by 25bp since June while the Fed cut its rates by 100bp since September.
- Headline inflation is now at 2.5% in the Euro Area while it is at 3% in the US. It has even been slightly increasing over the last few months. Core inflation remains higher than headline inflation. The return to the 2% inflation target is more complex in the US as the Fed first had to deal with labor-market overheating.
- Most raw-material prices have come back to their pre-war levels. Natural-gas price difference between Europe and the US has decreased. Tensions in the Red sea led to a massive rise of transportation costs in 2024 while the threat of tariffs by US president-elect Trump has also maintained transportation costs at a high level in the last couple of months.
- GDP growth differences between the US and Europe remained strong in 2024, and the OECD expects a 1.3% growth for the Euro Area versus a 2.4% growth for the US for 2025.
- Sovereign yields remain at a high level in the Euro Area. They decreased over the past year with the fall of inflation. The spreads between core countries and the periphery have also been declining as macroeconomic results have overcome expectations in countries as Spain or Greece but have been disappointing in Germany or France.
- Following the results of US elections, the US dollar strongly appreciated. US stock markets also rose but only temporarily, they are back to their October levels.

# I Growth and inflation in selected G20 countries

## **A The growth slowdown**

# Growth rates are diverging in advanced economies

Growth remains particularly high in the US while it was flat in the Euro Area in the fourth quarter of 2024. The OECD expects low growth for 2025 and 2026 for European countries and high growth for the US.

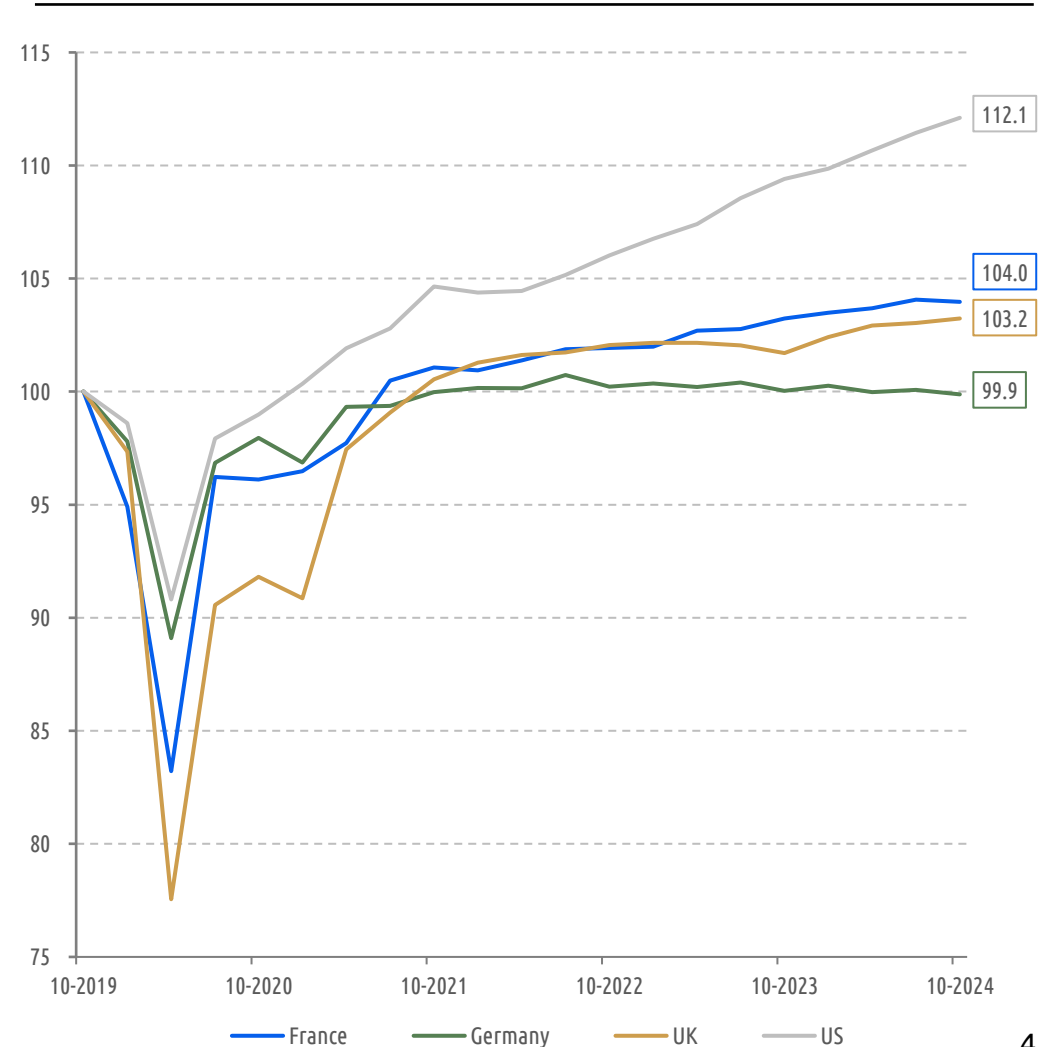

Yearly GDP growth rate (YoY % change)

Quarterly GDP (base 100 in 2019-Q4)

# Growth remains at high levels in emerging Asian countries

China, India and Indonesia outperforms other emerging countries. South Africa has particularly low economic growth. The OECD lifted their growth projections for Brazil.

Yearly GDP growth rate (YoY % change)

Yearly GDP growth rate %						
Country	2021	2022	2023	2024(E)	2025(P)	2026(P)

Quarterly GDP (base 100 in 2019-Q4)

# Government debts are increasing in G4 countries<sup>1</sup>

Inflation acted as a moderating factor on the evolution on debt ratios. With the fall of inflation, debt is increasing again. Deficits are quite large: from 2.3% in Germany to 7.9% in the US, and do not seem to be decreasing.

**General Government debt (% of GDP) – Since 2020**

**General Government deficit (% of GDP) – Since 2020**

# Consumer and business confidence indices are below their pre-covid levels

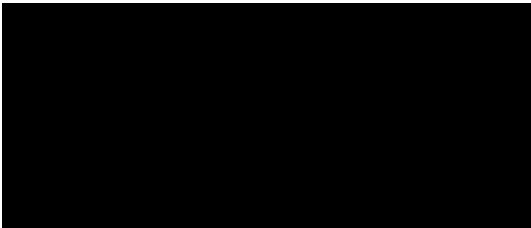

Over the last couple of months both indicators have been going down for European countries but up for the US.

**Consumer confidence indicator – Since Jan. 2020**

**Business confidence indicator – Since Jan. 2020**

# **B The seeds of inflation**

# Prices of raw materials have mostly returned to their pre-war range

Natural-gas prices are still at a one-to-four difference between the US and Europe, but price increased in the US following cold weather and higher demand. Wheat prices have strongly decreased since the Russian invasion to reach their pre-COVID level while copper prices remain high.

Oil prices in historical perspective (USD per barrel)

EU (left scale) and US (right scale) natural gas prices<sup>1</sup> (€/MWh)

Copper prices in historical perspective (USD/ton)

CBOT Wheat (USD/Bushel)

# New supply-chain disruptions have occurred in 2024

Transportation costs also increased following the threat of tariffs by incoming US President Trump. They are now slowly decreasing.

**% of EU business in the construction industry reporting shortages of materials and equipment as a limiting production factor**

**Shipping Container Index (based on spot rate for 40 feet containers)**

# Labor markets remain tight... (1/2)

The unemployment rate, both in the US and the EZ, remains at very low levels. In the US, the vacancy/unemployment ratio fell to its pre-covid level. In the Euro Area, it has also been falling but it remains high.

**Beveridge curve - USA, Monthly**

**Unemployment rate (% of labor force) - Monthly**

Civilian unemployment rate – Total – USA - Seasonally adjusted

# Wage inflation remains higher than price inflation

However, it is quite low in France.

Wage growth tracker (nominal wage growth of individuals) – US (Monthly)

Indicator of negotiated wages in the Euro Area (Quarterly)

— Euro Area - Labor cost index      — Euro Area - Indicator of negotiated wages  
— France - Salaire mensuel de base (SMB)

## **C Inflation unbound**

# Headline Inflation is now close to the 2% target for most advanced economies

Headline inflation increased however for European countries and the US in November and December. Core inflation is slowly decreasing but remains higher than 2% in all countries (but Italy).

CPI and core inflation in advanced economies (YoY % change)

Monthly Year-on-Year inflation rates (%) – 2023/2024											
Country	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan
<b>US</b>	3.5	3.4	3.3	3.0	2.9	2.5	2.4	2.6	2.7	2.9	3.0

CPI Inflation (YoY % change) – since Jan 2021

# Implied GDP deflators strongly decreased over the last couple of years

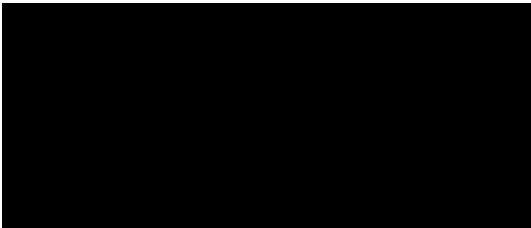

It is particularly low for France.

## Quarterly implied GDP deflator

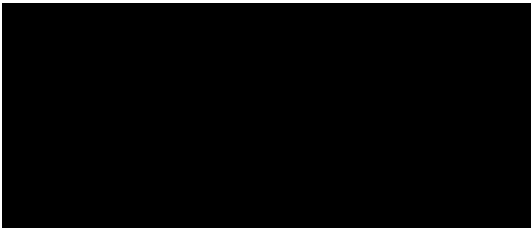

Implied GDP deflator (YoY % change)								
Country	Q1-23	Q2-23	Q3-23	Q4-23	Q1-24	Q2-24	Q3-24	Q4-24
USA	5.3	3.5	3.1	2.6	2.4	2.6	2.3	2.4
Germany	6.8	6.3	6.3	5.3	3.8	3.4	2.7	2.5
France	5.2	6.0	5.2	4.8	3.3	2.0	2.1	1.3
UK	8.3	8.0	7.3	5.1	4.2	3.0	3.2	-

## Quarterly implied GDP deflator – Since Q1-1992

## II Monetary policy

**A In the US**

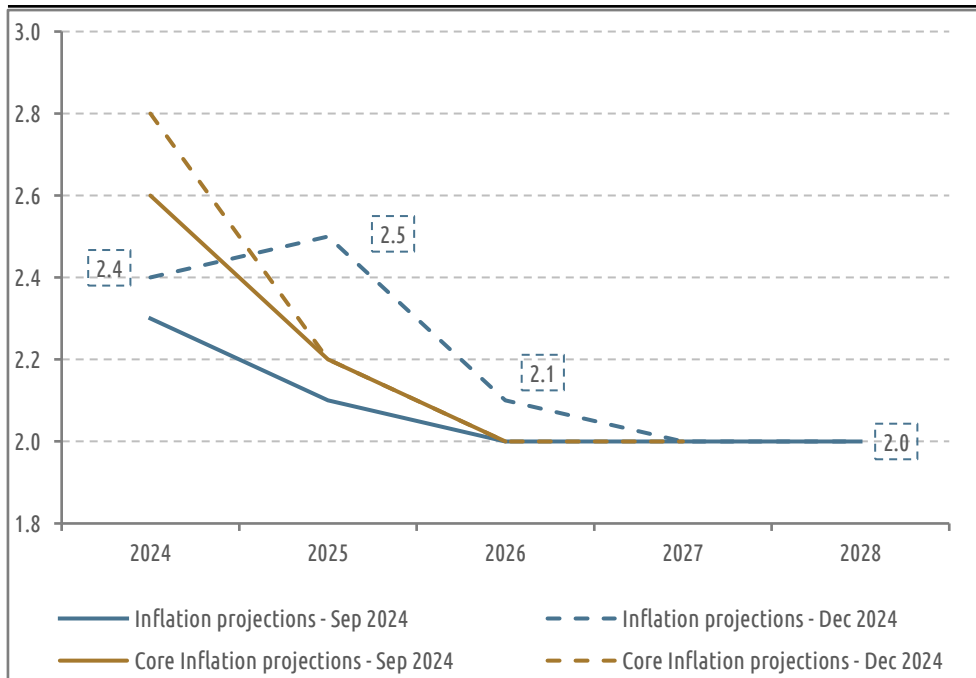

# The Fed maintained its interest rate unchanged in January

While economic activity and labor indicators are solid, inflation has been increasing over the last few months. The Fed considers that the economy is currently well balanced, and the decrease of its interest rates can wait.

## Personal consumption expenditures (PCE) – Monthly (YoY % change)

Price indexes for Personal Consumption Expenditures							
Indicator	06-24	07-24	08-24	09-24	10-24	11-24	12-24
PCE inflation	2.4	2.5	2.3	2.1	2.3	2.4	2.6

## PCE Inflation Projections as of September 2024 (%)

## Key considerations

- The target range of the federal fund rates was maintained to 4.25%-4.50% on January 29<sup>th</sup>.
- The decision was expected by most investors. It follows three cuts since September. The rate was previously at its highest since 2001.
- In December, the Fed revised up inflation projections from 2.3% to 2.4% for 2024 and from 2.1% to 2.5% in 2025. Similarly, new GDP projections are higher (2.5 vs 2.0% in September). Unemployment projections were revised down from 4.4% to 4.2%.
- Next meeting will be on March 19<sup>th</sup>. The question is whether a new cut will occur.

## Federal Reserve economic projections as of 11th June 2024

Indicator	2024	2025	2026	2027
Change in real GDP	2.5	2.1	2.0	1.9
Unemployment rate	4.2	4.3	4.3	4.3
Inflation	2.4	2.5	2.1	2.0
Federal funds rate	4.4	3.9	3.4	3.1

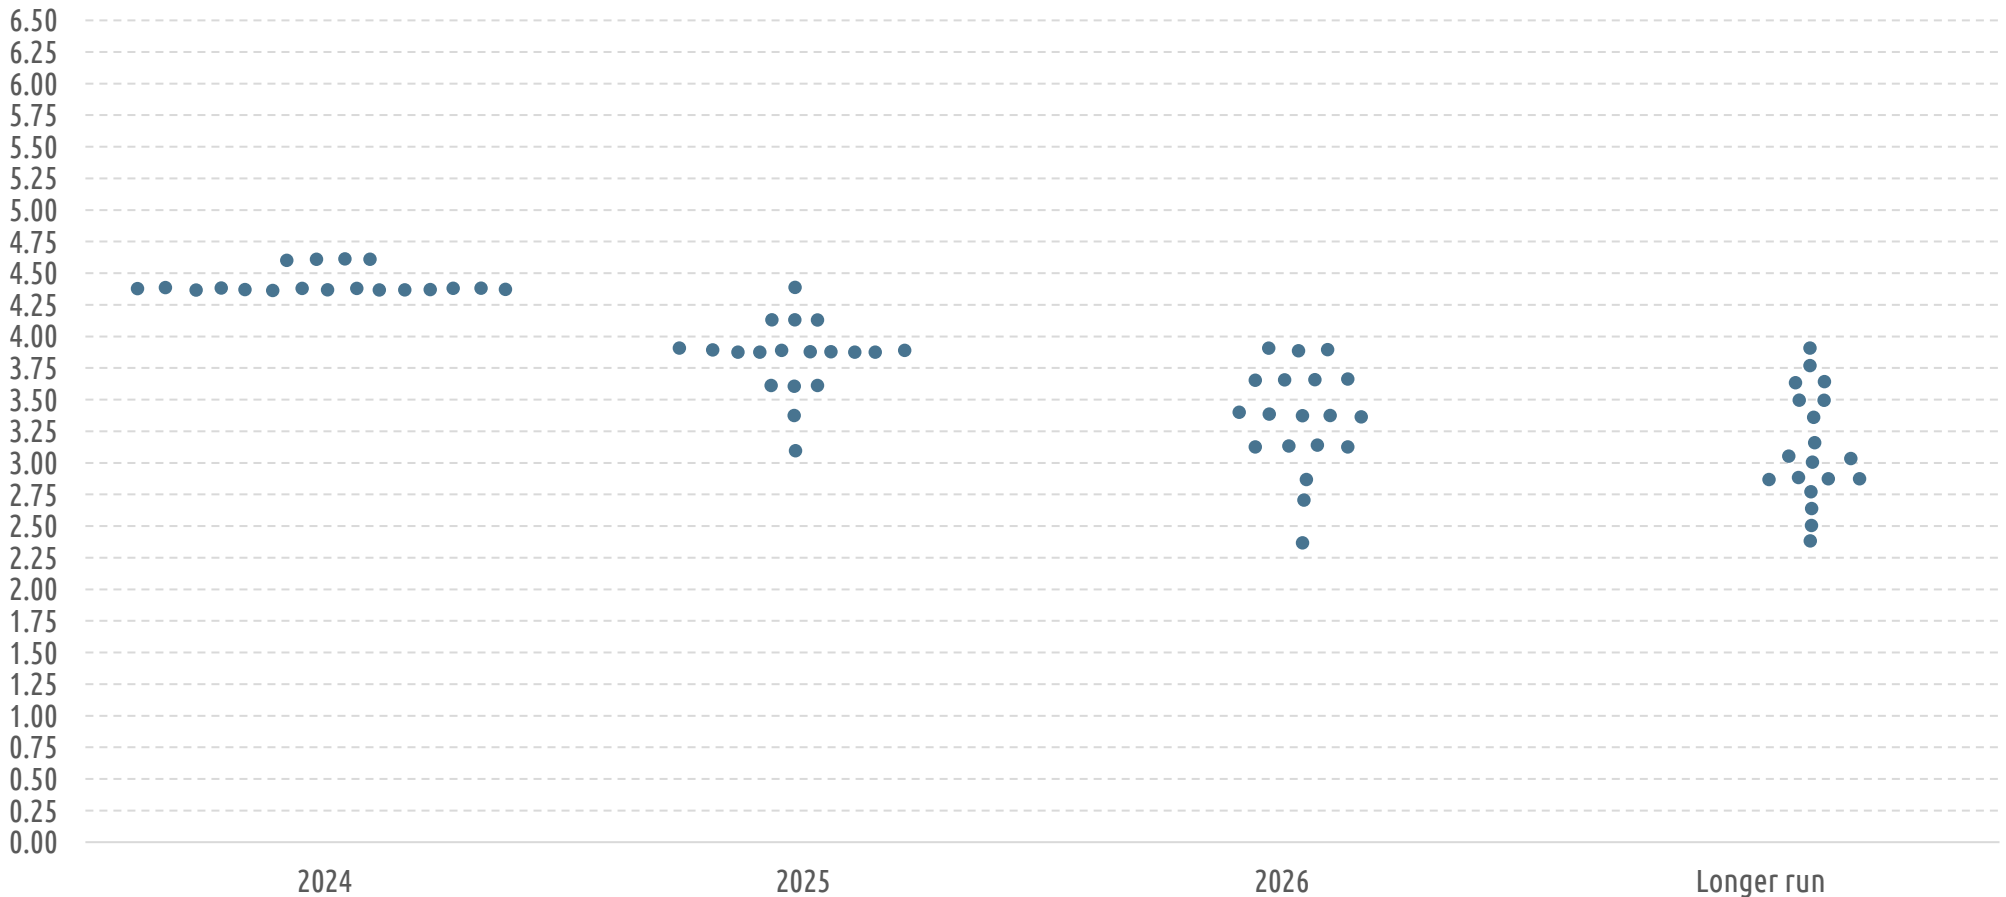

“With our policy stance significantly less restrictive than it had been, and the economy remaining strong, we do not need to be in a hurry to adjust our policy stance.”

JEROME POWELL, PRESS CONFERENCE, JANUARY 29<sup>TH</sup>, 2024

# Monetary policy decisions from the Fed (2/2)

The Federal Reserve’s so-called dot plot shows the median year-end projection for the federal fund rates. In December, Fed members have forecasted higher interest rates than previously. It notably implies that Fed members now consider that only two 25-bps cut will occur in 2025.

FOMC participants’ assessments of appropriate monetary policy: Midpoint of target range or target level for the federal funds rate as of 18<sup>th</sup> December

# Nominal long-term rates are at high levels

Real rates however are expected to stay around 2% in real terms.

**Federal funds interest rate**

**Inflation Expectations – US (%)**

**10-Y Nominal yield – US**

**Forward Rates on 10-Year U.S. Treasuries (%)**

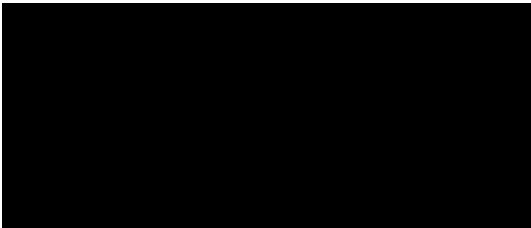

# The US yield curve is positive for the first time in two years

This indicates trust in a durable decrease of inflation and in a sustained growth of the economy.

**U.S. 10Yr/2Yr Spread – Since Jan. 1978**

**B In the Euro Area**

# The ECB cut again its rates in January while inflation slightly increased

President Lagarde explained that ECB actions over the last few months have brought inflation down and the ECB is confident that inflation will be around the 2% target in 2025. As such, they decided to lower their key rates to support economic growth that has been affected by some downside surprises.

**Inflation expectations & projections as of December 12<sup>th</sup> 2024 (%)**

## Key considerations

- **The Governing Council decided to cut by 25bp its three key ECB interest rates. This is the fifth 25bp cut since June. They were previously at their highest level since the creation of the ECB.**
- In December, ECB staff have slightly decreased their inflation projections. Headline inflation is expected to average 2.4% in 2024 while core inflation should reach 2.9%. They especially revised downwards their output growth projections slightly for 2024 from 0.8% to 0.7% and in 2025 from 1.3% to 1.1%.
- **The next meeting is set on March 6<sup>th</sup>. The question is whether a new cut will occur.**

ECB economic projections as of December 12 <sup>th</sup> 2024				
Indicator	2024	2025	2026	2027
Change in real GDP	0.7	1.1	1.4	1.6
Unemployment rate	6.4	6.5	6.3	6.1
Inflation	2.4	2.1	1.9	2.1

“The disinflation process is well on track. [...] Most measures of underlying inflation suggest that inflation will settle at around the target on a sustained basis.”

CHRISTINE LAGARDE, ECB PRESS CONFERENCE, JANUARY 30<sup>TH</sup> 2025

# In the Eurozone, nominal rates are decreasing but still at high levels

Expected real rates, however, are near zero in the longer run. ECB deposit rates decreased to 2.75% in February.

**ECB deposit rate**

**Inflation Expectations<sup>1</sup> - Germany (%)**

**10-Y Nominal yield – German Bund**

**Forward Rates on 10-Year German Bund (%)**

# The German yield curve is positive, for the first time in almost two years

It is following the pattern of the US yield curve, signaling that investors believe that the decrease of inflation will be durable.

**Bund 2Yr/10Yr Spread – Since Jan 1998**

# The Euro depreciated since the European election

It is at its lowest since the end of 2022.

Nominal Foreign exchange rate in historical perspective – Since Jan. 1999

Nominal Foreign exchange rate in historical perspective – Since Jan. 2020

“The level of the euro matters significantly for imported inflation, [...]. A euro that is too weak would go against our price stability objective”

BANQUE DE FRANCE VILLEROY DE GALHAU, 06 JUNE 2022

### **III Impact on yields and spreads**

# In Europe, sovereign yields remain at particularly high levels

The yields are now very close for France and Greece.

Italian, Greek and French 10-Y yields – Since Jan. 2021

# Tensions on spreads have eased off for the periphery since their peak in 2022

For France, the spread increased after the results of the European and legislative elections and have not returned to the 50bp medium-term value. It has been decreasing following the passing of the Finance Act.

Italian, Greek and French spreads over 10Y German bund – Since Jan. 2021

# High-yield corporate-bond spreads have been decreasing in the last few months both in the US and the Euro Area

They reached their lowest levels since 2017. The spread is lower in the Euro Area than in the US for the first time in almost two years.

High yield corporate bond spreads – Since 2000

High yield corporate bond spreads – Since 2022

## **IV Impact on stock markets**

# Stock market indices have strongly increased during the last year except the Shanghai composite.

US indices have strongly increased following the results of the US elections but they are now decreasing while the Eurostoxx 50 is improving.

Nasdaq Composite, S&P 500, Shanghai Composite and Eurostoxx 50 indices – Jan. 2022 = 100

# The VIX index surged in December following the Fed's rates forecasts for 2025

It is now back to its long-term average

VIX index – Since 2000

VIX index – Since 2022

# Financial stress indicators returned to pre-war levels

**Composite Indicator of Systemic Stress (daily) – Since Jan. 1980**

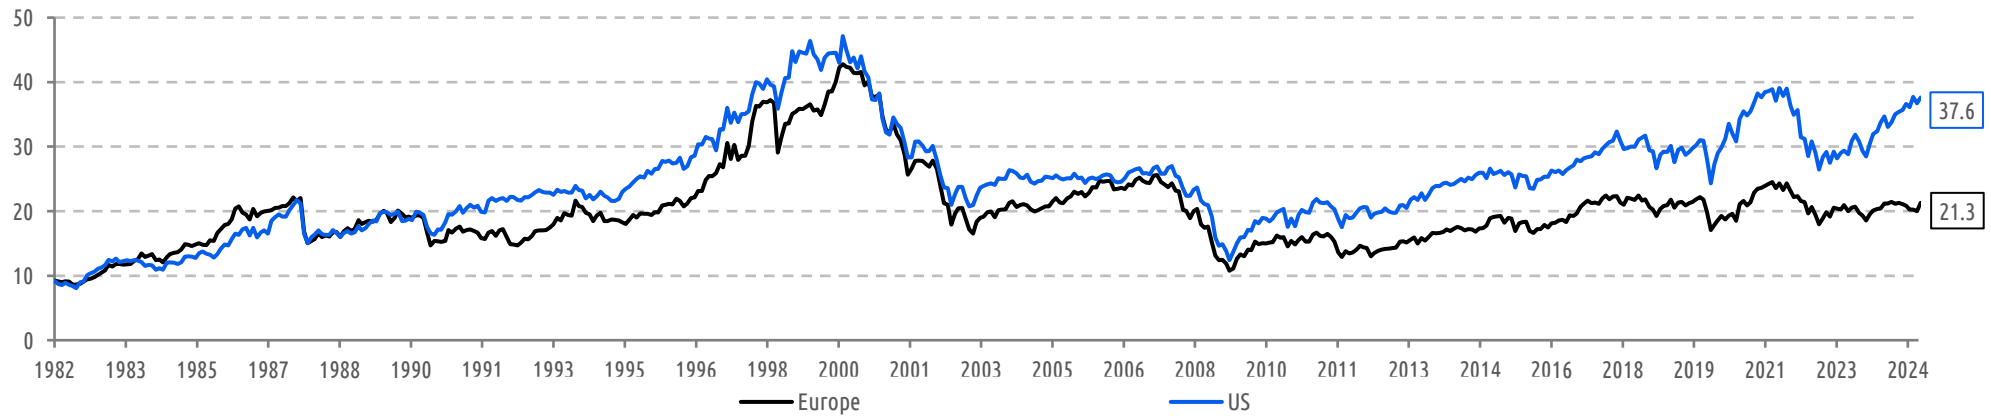

**Composite Indicator of Systemic Stress (daily) – Since Jan. 2020**

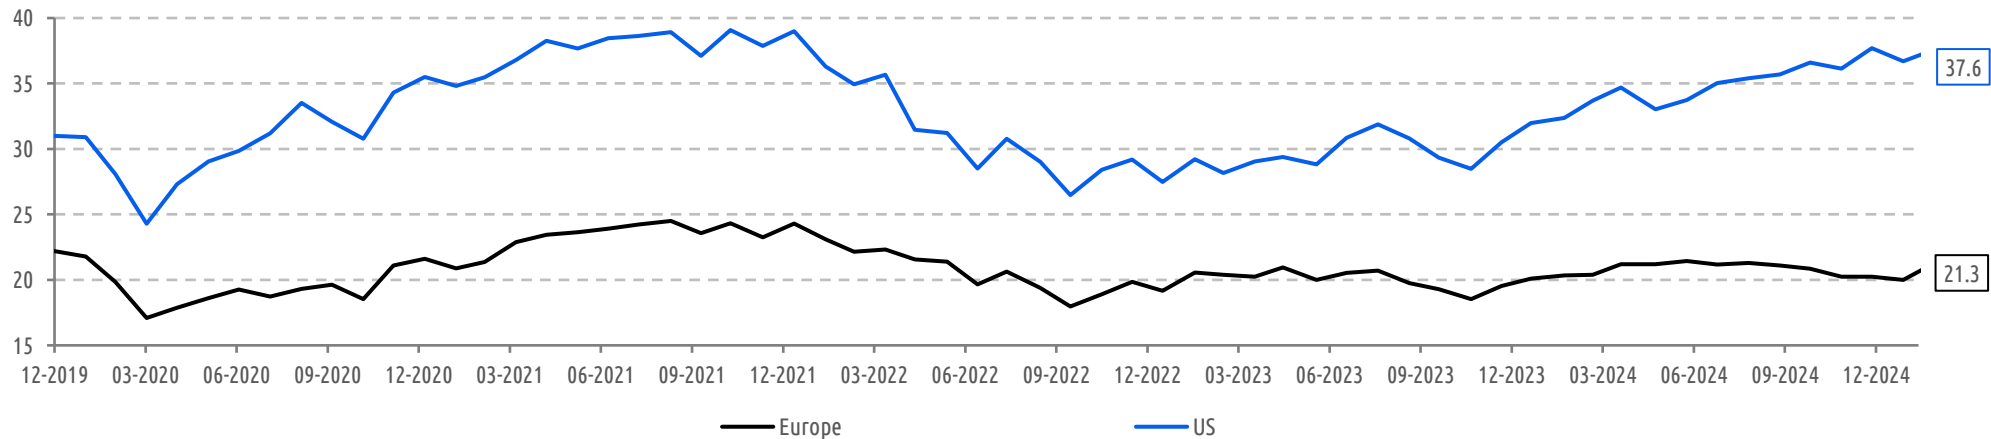

# Shiller CAPE ratio is higher in the US than in Europe

Shiller CAPE ratio is close to its pre-Covid level and to its historical average in Europe.

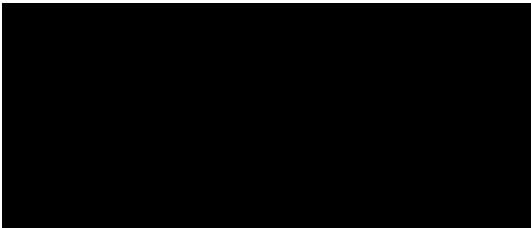

Cyclically Adjusted Price Earnings ratio – Since 1982

Cyclically Adjusted Price Earnings ratio – Since 2020
